

The Volvo diesel generator sets produced and operated by our company are assembled from diesel engines produced by the Swedish VOLVO Group and equipped with generators of domestic and foreign brands. They have the characteristics of low fuel consumption, low emissions, low noise, small appearance and compact structure. The units have high bearing and loading capacity, reliable performance, stable operation, low exhaust emissions and low operating costs; the power range is 75KW~570KW. Volvo generator sets are reliable in performance, strong in horsepower, green and environmentally friendly, and humanized safety design, which are deeply favored by customers around the world.
