

静音型发电机组 Silent generator set

In 2002, our company independently developed a soundproof box suitable for diesel generator sets. Its noise reduction can make the noise within 7 meters in an open space reach (75-80) decibels when the diesel generator set is running at full load, and the noise can reach (65-70) decibels outside 7 meters. When the equipment is fully loaded and operating normally, it will not disturb people's normal rest.

The outer paint of the soundproof box independently developed by our company is a baking varnish. It can be used in the open air for a long time without rusting, oxidation, etc. Iron materials are not easy to rust, oxidize, etc., and have a long service life; for sound insulation, we use high-quality flame-retardant cotton as the main material. After self-processing by our company, the silence is more perfect, and our company professionally designs multiple sound insulation boards inside the box to block the noise from spreading.

This soundproof box fully meets the use of public rest places with extremely strict noise requirements such as hospitals, guesthouses, and hotels.

声音强度 Sound intensity

Bloom	Whisper	Fan	Silent unit	Motorcycle
				
0~20dB	20~40dB	40~60dB	60~75dB	80~90dB
